

THE UNIVERSITY OF HONG KONG
School of Computing and Data Science
Guidelines for Final Report (COMP4501 / COMP4502)

This is a general guideline for preparing the final report. Consult your supervisor to see if there are any special requirements for your project. This is only a rough guideline, and should not be viewed as a strictly followed template.

There is no page requirement for the final report. In general, the final report will include the following content:

1. Cover page

- Project title & Project ID
- Your name & UID

2. Content Page

3. Abstract

- ~200 words to summarize the details and main contributions of the project.

4. Declaration & Acknowledgements

- Declare that the project is your own work.
- Words of appreciation to anyone who supported you to complete the project.

5. Introduction & Objectives

- Give a brief introduction to the project, including the project background, project objectives and requirements.
- List the contributions of the project.

6. Project Background and Literature Review

- What existing literature / solution / application is available now?
- Why do you want to do the project?
- Why is such a project desirable? What is the value and impact of your project?

7. Project Methodology

A detailed discussion on how the project is implemented. For example,

- Functionalities of the software to solve the proposed problem (for COMP4502)
- Datasets that you would work on (for COMP4501)
- An account of the methodologies / theories / models that you would adopt
- An account of the platforms / tools that you would use

8. Results & Discussion

- Describe and explain the results of the project in detail
- Highlight the significance of your project results
- Critically evaluate your project results

9. Conclusion and Future Works

- A short conclusion on the findings of the project
- Describe what can be improved in the future

10. Appendices

- Software, program listing, operation manual
- Datasets, datasheets, etc.

11. References

12. Declaration of the Contribution of Each Individual Member of the Group

Remarks:

1. If you are doing a data science project for COMP4501, you may read the guidelines from COMP3522 for more guidance on how to write Sections 6-9.

2. Individual Reports VS Group Reports

- All FYPs are individual projects, hence individual report is a requirement. However, in many projects, students work in groups. In such cases, every student should submit an individual report, and they cannot copy paragraphs from each other, even though the parts are common. They should write their own report.
- However, we understand that a group report may be needed to provide a whole picture of the project, but it is not a requirement. Consult your supervisor whether a group report is appropriate. If so, the group report can combine and re-use the contents of the individual reports.
- Your project supervisor has final discretion on the exact requirements of your group's Individual reports / Group reports. Please communicate with him / her to understand the expectations before you start writing.
